

1. Find and Delete bulk files with certain extensions like `"*.o"` files left over after C code compilation.

```
find /home/user/project-1/ -name "*.o" -type f -exec rm {} \;
```

2. Deletion of Bulk files by their type.

```
find /home/user/project-1/ -executable -type f -exec rm {} \;
```

3. Save Git Password in Credential memory cache.

```
git config --global credential.helper cache
```

4. Save Git Password in Credential memory cache temporarily with auto deletion on timeout.

```
git config --global credential.helper 'cache --timeout=3600'
```

5. Change Branch of Git Repo to push changes to your designated branch.

- 5.1. First Check what branches you have available:

```
git branch -a
```

- 5.2. Copy Paste name out your branch to select it:

```
git checkout release/web-app-backend
```
